Spectacular cliffs and traces of the Vikings can be found along Ireland's most beautiful train route. It leads from Rosslare in the southeast via the capital, Dublin, to the Howth Peninsula. In times gone by, the region has been inhabited by Vikings, Normans and the English.

The scenery in the east of the Emerald Isle is picturesque: long beaches and solitary mountains. This was where the Vikings once landed. The Normans also left their mark. The region is also marked by its centuries-old history with England. In addition to the magnificent castles of the former colonial rulers, the ruins of an early Christian monastery and a prehistoric dolmen tomb bear witness to the diverse cultural influences here.

The camera team meets people who embody the modern nation while continuing to follow in the footsteps of their ancestors. A detour leads to the fertile hinterland of County Wexford and magical places in the Wicklow Mountains, before heading into the hustle and bustle of the city of Dublin. There's the opportunity for some rest and relaxation in the natural paradise near Howth, where a large colony of grey seals make their home.

Hidden in the forests of eastern Germany are relics of the Cold War. This documentary follows experts as they search for clues and uncover secrets in the bunkers of the former East Germany.

The German state of Brandenburg is home to a ghost town. Parts of the town of Wünsdorf are still cordoned off today. That's because Wünsdorf was once the East German headquarters of the Soviet armed forces. This "forbidden town" also includes the World War Two era "Zeppelin" bunker, used by the German Wehrmacht and later by the Soviets for their "Ranet" intelligence center. It was from here that orders for all Soviet soldiers stationed in East Germany were sent, as well as all reports to Moscow. The film follows bunker expert Sylvia Rademacher as she goes underground to uncover Soviet secrets.

During the Cold War, fears of a nuclear conflict prompted the East German political leadership to take action. In the event of such a war, the "Mielke" nuclear bunker in Biesenthal, Brandenburg was intended to serve as a command post for the head of the security service, or "Stasi". Observing strict safety precautions, expert Hans-Jürgen Herget guides visitors through the huge underground facility. The building extends over two floors, with more than one hundred rooms. It stands in contrast to the simple shelters meant for the families of East Germany's political elite in nearby Wandlitz.

In Machern, near Leipzig, Jana Bleyl shows how East Germany's state apparatus was supposed to operate from underground in the event an emergency. The former regime critic wants to uncover the history of the almost 4,000-square-meter Stasi bunker here. Its furnishings, as well as its communications and surveillance equipment, are still preserved in their original condition.

Climate Ahoy - How Ships Can Become Cleaner

Soot, particle pollution and heavy fuel oil: freighters and cruise liners are real climate killers. It's high time for a change of course on the seas. The film shows how both innovations and tried-and-tested ideas can make shipping cleaner.

Container ships supply people all over the world with goods, while cruises attract millions of passengers every year. But ships also cause around three percent of global greenhouse gas emissions.

This is despite the fact that emission-free maritime trade has been possible for thousands of years - thanks to the wind. "We need to get back to sailing ships," says Captain Andreas Lackner. Fifteen years ago, the Austrian and two friends put a sailing cargo ship into operation. The "Tres Hombres" has been working since 2010, transporting up to 40 tons of goods across the seas without an engine. The clipper ship takes cocoa and rum from the Caribbean to Europe, or 20,000 bottles of organic wine from La Rochelle to Copenhagen. "We're closing the gap between fairly paid producers of organic goods and conscious consumers," says Lackner.

Others have also rediscovered the power of the wind. Ralf Oltmanns from East Frisia sailed the world's oceans at the age of 16, before founding an advertising agency. Now, 30 years later, the passionate sailor has developed a new twist on a century-old propulsion system in order to make large ships cleaner. The Flettner rotor, named after its inventor, Anton Flettner, is a type of sailing machine: a cylindrical structure that rotates in the wind to generate thrust. Oltmanns has used the original invention to create a modern product. "Depending on the size of the rotor and the wind conditions, a freighter can save between 5 and 25 percent on fuel," the 63-year-old calculates. The rotor could make both cargo and passenger ships more climate-friendly. Anna Braren was convinced by his idea: Her shipping company equipped its first ship with the Flettner rotor in 2021.

With countless innovations and strict regulations, Norway is leading the way in the transition to emission-free shipping. The Scandinavians are focusing on electric motors and hybrid technologies. Climate change is already being felt in the Norwegian Arctic - another reason why the government is getting serious. From 2026, only emission-free ships will be allowed to sail in Norway's most beautiful fjords. And climate-friendly tourist ships are already sailing along the traditional postal ship route.

Europe's Oak Trees - Nature's Great Adapters**

A temperate forest stretches across Europe from Brittany to the Urals. It consists mainly of deciduous trees. One tree has a very special role to play: the oak.

For the Celts, the oak symbolised the connection between the spirits of heaven and earth. In fact, the tree is perfectly adapted to the changing seasons: In autumn it loses its leaves, in winter it rests under a blanket of snow and in spring it begins to sprout anew. Its fruits are a tasty treat for wood mice, wild boar, squirrels and jays, all of which help to spread the oak seeds. High in the branches, green woodpeckers and bats thank the tree for its hospitality by ridding it of the parasites that prey on its wood and leaves.

The shy lynx also serves the oak well, defending it from the deer and ibex that love to nibble on its shoots. Beneath the ground, the oak lives in symbiosis with fungi, which provide it with vital nutrients. Ecologists, biologists and fungal researchers explain the connections between these fascinating interactions. The secret of the success of the highly resilient temperate forests lies in their biodiversity. Unfortunately, they are increasingly being replaced by pure conifer plantations, which meet the demands of the highly standardized timber industry but deplete the soil, causing numerous species to migrate. In view of industrial timber construction practices and the expansion of urban centers, the question arises: is the oak really as immortal as people claim?

Empire of Silence**

The Democratic Republic of the Congo has been stricken by war for decades. But little attention is paid to it by the media and the international community. Estimates put the number of victims in the millions, with no end in sight. All parties in the conflict seem to be trapped in a spiral of violence. The disputes are over power, money and access to the country's valuable natural resources.

Belgian film director Thierry Michel has been travelling throughout the Congo with his camera for over 30 years. He has witnessed the struggles and suffering, but also the hopes of the Congolese people. In the film, the speech by doctor and Nobel Peace Prize winner Denis Mukwege outlines the story of the relentless violence that has devastated and destroyed the Congo for so long.

None of the actors in this drama are spared in this uncompromising film - from Congolese rulers, to neighboring countries, to international institutions. The film draws on the UN Mapping Report, which records the war crimes and crimes against humanity committed in the Congo between March 1993 and June 2003. The report names the perpetrators, which caused unease and was kept secret.

The film paints a contrasting picture of a country caught between outrage and solidarity. It speaks out in favor of coming to terms with history, and against forgetting. The film aims to play a role in setting the record straight. After decades of impunity, the film shows, those responsible for crimes must be brought to justice.

Suddenly, I was Deaf

Oliver Faulstich is 37 years old. He treads the line between people who are deaf, and those who can hear. When he was 15 years old, he fell ill with a rare form of meningitis. He lost his hearing from one day to the next.

A shock for the teenager - and for his parents, too. Thanks to the modern technology of cochlear implants and a lot of training, he can now lead an almost unrestricted life again, as a family man. But everyday life remains exhausting. Now, he campaigns for people who find themselves in situations similar to his own.

Flat landscapes, endless views, screeching seabirds in the blue sky. Cows graze on the salt marshes, and all around: the sea. A snapshot of life on the northern German 'hallig' or island of Oland. But the idyllic scene isn't immune to the impact of climate change.

The peaceful habitat faces a very real threat. Global warming is causing the sea level to rise inexorably, flooding not only pastureland but also endangering residents' homes. The film accompanies them as they deal with the challenges and do what they can to make their hallig crisis-proof.

00:30 Made in Germany - Your Business Magazine**01:00 DW News - News****01:15 DocFilm****Smart Insects - How Tiny Brains Do Brilliant Things**

The latest research shows we've long underestimated the intelligence of insects. Bumblebees, for example, succeed at behavioral tests also passed by intelligent crows. They use tools to reach nectar in an artificial flower. Behavioral biologist Elizabeth Tibbetts is amazed at the paper wasp's capacity to learn and understand. "They may not be universal geniuses like artists, but they're brilliant in their fields," says the researcher at the University of Michigan. The animals can memorize faces, eavesdrop on fighting rivals to assess potential opponents and think strategically. They can master brain teasers that even small children can't solve.

Bumblebees, along with their relatives bees and paper wasps, are just three of almost a million insect species worldwide. But when it comes to these species, science agrees that the image of robotic creatures with no intelligence, that only exist to eat, be eaten or produce offspring, is outdated.

Below, above and alongside us live tiny animals capable of learning and acting with intelligence. They are able to store images, shapes, colors and experiences in their brains. For a long time, it was generally believed that intelligent behavior in insects was superfluous, as most only live for a few weeks.

Earwigs live for about a year; as babies, their mothers apparently teach them how to nurture their own brood. What's even more surprising: insects from the same clutch can develop different personality traits. In horseradish flea beetles, for example, some are braver than others. And, as evolutionary biologist Elizabeth Tibbetts says: "Paper wasps are as bitchy as the protagonists of Game of Thrones." The animals plot, betray colleagues and fight to the death to be queen.

The insect world is much more complex than previously thought. One reason is that any species with a wide range of diverse individuals can better adapt to climate changes - an evolutionary advantage for survival.

00:30 ¿Cómo te afecta? - The Program for Latin America's Youth**01:00 DW News - News****01:15 DocFilm****My Body. My Gut. - The Underappreciated Control Center**

The intestine is a true marvel. This organ's complex functions extend far beyond the mere processing of food. The intestine affects the immune system and also has a powerful effect on our emotional well-being.

If a person's gut is doing well, that person is doing well. If the gut is doing poorly, however, it can lead to chronic inflammation -- or depression. So, what can be done to protect and strengthen the gut?

This documentary follows people for whom the gut plays a special role in their lives. They speak openly about what is sometimes a taboo subject.

Jana Eberhart has a stressful everyday life. The student works as a model and is a passionate about sports. In fact, she's about to take part in an Ironman competition. Can a change in diet strengthen her gut so that she can perform better? Sports and nutrition consultant Dr. Jens Freese accompanies Jana on her project over an extended period of time. What impact will dietary changes and other interventions have?

For actor and fitness influencer Philipp Stehler, careful management of the gut is essential. He lives with ulcerative colitis, a chronic intestinal inflammation condition. This disease almost cost him his life. His large intestine had to be surgically removed. Philipp Stehler talks openly about his life then and now. While his diet used to consist mainly of meat and protein shakes, he now eats a vegan diet and practices yoga and meditation every day.

Carina Speck has been living with irritable bowel syndrome or IBS for 13 years. Bloating, diarrhea and stomach cramps accompany her in everything she does. But the social media manager doesn't want to isolate herself because of it. On Instagram and TikTok, she gives tips on things like traveling with IBS. Dr. Miriam Stengel from SRH Klinikum Sigmaringen guides her, with recommendations on how she can get a better handle on her symptoms.

Chick Shredding Banned! - Where are the Roosters Now?

Roosters bring little profit on the poultry market. They lay no eggs and produce little meat. So, many German hatcheries sell millions of chicks abroad. Animal welfare usually falls by the wayside.

Because they don't lay eggs, around 45 million male chicks used to be killed in Germany every year. This practice has been banned since 2022. Since then, many German egg cartons began carrying the label: "No chick killing."

But, if they aren't being killed, where are the roosters now?

Rearing the animals is so expensive in Germany that most hatcheries simply cannot afford to keep the male chicks. The so-called 'brother roosters' are often sent abroad to be reared, often to Poland. But what are conditions like there? Animal welfare activists have evidence of serious abuses.

The fattened cockerels are then often sold to Africa. In Ghana, meat from Europe is usually cheaper than domestic poultry. But local Ghanaian breeders suffer massively from these cheap imports from Europe.

The film follows the trail from the hatching of the chicks in a German hatchery to rearing in Poland and sale to Ghana. The research shows: The ban on chick killing in Germany shifts the problems abroad and animal welfare is usually ignored. The law seems well-intentioned but poorly thought out.

My Family's Lies - A Childhood Between Togo and Munich

The fact that 32-year-old Rita leads such a successful life today is nothing short of a miracle. Rita was born in Togo in 1991 and was raised by her grandparents. For a long time, she thought they were her parents. Hers was a happy childhood - but it ended abruptly.

At the age of nine, she's told that her biological mother lives in Munich and from now on, she must live with her. Rita travels to Germany alone, where she receives a rather cold reception from her supposed mother. When Rita is abused by an acquaintance of her mother's, she's too afraid to say anything.

With the help of her friends and a teacher, Rita finally moves into a child protection centre. Rita's suspicion that this woman is not her mother at all becomes more and more entrenched. A relative confesses to her that she is in fact her aunt and that her real mother lives in Togo.

Rita bounces back from the shock and at the age of 17, she begins a course in restaurant management. Everything seems to be going well, but the traumas of her childhood soon catch up with her. After several unsuccessful suicide attempts, Rita realizes: to get answers to her questions, she needs to travel to Togo. There, she uncovers layer upon layer of lies.

Japan at a Crossroads - The End of Pacifism?

In 1945, under US occupation, the Japanese constitution was created. Toshiko Tanaka, then six years old, had survived the atomic bombing of Hiroshima. She hoped that this "peace constitution" would prevent wars in the future. But now, Japan is arming itself again.

After 1945, Japan was the only country in the world to commit itself to renouncing war in its constitution. But in the face of increasing dangers, the island nation has now announced a rearmament program. By the end of this decade, Japan could become the third strongest military power in the world. The pacifism born of the horrors of Hiroshima and Nagasaki has given way to fear of aggressive neighbors like China, Russia and North Korea.

Under conservative governments and in view of the increasing withdrawal of the once-protective USA, the Japanese armed forces have acquired weapons systems. These include amphibious vehicles, US F-35 fighter jets and two aircraft carriers. There is enough plutonium from civilian use in the country to produce up to a thousand nuclear warheads. Missile systems are also available.

Asia is the key to the future. This documentary shows a new side of Japan and provides insight into the military changes that are taking place there - far from the war in Ukraine. Toshiko Tanaka, one of the last hibakusha, as the survivors of the 1945 atomic bombings are called, fears war once more.

SUN 2025-01-12**00:00 DW News - News****00:02 DocFilm****Penthouse or Hovel - Living on a Roof**

Cheng Chung Au lives in an illegal dwelling on the roof of a tower block in Hong Kong. Despite the rat plague and the typhoon risk. In New York City, too, there were simple dwellings for servants on rooftops - long before penthouses and rooftop bars came along.

Like thousands of other people in Hong Kong, Cheng Chung Au lives in an illegally constructed 'cage flat' on the roof of a high-rise building. Over the decades, he's come to terms with the rats and the typhoons. He and his wife couldn't afford a regular flat and the waiting lists for social housing are long.

Until the early 20th century, there was also a 'city above the city' in New York - for servants and workers. Then these very same spaces were developed into exclusive penthouse flats and rooftop bars. In the 1920s, plans for the Rockefeller Centre complex in Midtown Manhattan included rooftop gardens that were envisioned as a public park, with bridges to other buildings. The Great Depression prevented the project's realization.

Today, apartments on the upper levels of New York's mega-high-rise buildings are on the markets for hundreds of millions of dollars. In the future, newly constructed buildings with roof surfaces in the US metropolis will have to be greened or fitted with solar panels. Greenery can prevent sewers from overflowing during heavy rainfall. And the insulating effect of soil and vegetation saves cooling and heating energy. For activist Anastasia Cole Plakias, whose Brooklyn Grange is one of the largest rooftop farms in the US, the potential of green roofs is far from exhausted.

Rooftops are extreme zones: A refuge for people looking for a home, and a testing ground for the city of the future.

For thousands of years, the inhabitants of the Brazilian rainforest have been using medicinal plants. But this knowledge is in danger of disappearing. Leticia Yawanawa has an ambitious plan: she wants to preserve herbal medicine for posterity.

The deforestation of the Brazilian rainforest is having a devastating impact on the global climate. But it is also displacing indigenous tribes and eradicating their unique knowledge of the healing powers of nature.

Scientists agree that only a third of the total biodiversity of the rainforest has been researched. Much of the knowledge is in the heads of indigenous scholars. This understanding is passed on orally, from generation to generation. Many tribes are being driven out of their habitats. The knowledge of the shamans - who in addition to their spiritual duties treat their people medicinally using plants and herbs from the jungle - is in danger of being lost forever.

In the documentary, Leticia brings together shamans from different tribes and asks them to share their knowledge. They set off on journeys through the rainforest, often lasting days. Here, they share their knowledge of medicinal plants, along with traditional rites and ceremonies. We learn about the healing powers of plants and herbs. Some may be familiar to us, while others are known only to local indigenous populations.

Microcredits for the world's poor have long been considered the ideal way to combat poverty. But this film documents a bleak scenario -- in which microcredits have destroyed entire families. Over-indebtedness has driven some recipients to suicide.

Expectations were high. When Muhammad Yunus, the "banker to the poor" and founder of the Grameen Bank for microfinance in Bangladesh, received the Nobel Peace Prize for his work in 2006, it was clear to many that the principle of helping people to help themselves would lift many out of poverty.

From the 1980s to the early 2000s, microcredits were seen as one of the best tools for combating poverty. However, the loans, which were initially seen as a positive inflow of liquidity, quickly led to further financial obligations for many families. After all, interest had to be paid on these loans. Illegal lenders stepped in. The pressure on families became unbearable, leading to the sale of land, migration, the break-up of families and ultimately even suicide.

The film tells the stories of three Cambodian families. Along the way, it debunks the myth of microfinance as a tool that truly helps the poor. Told through the eyes of the protagonists and through their personal experiences, this film highlights the hardships faced by so many Cambodians because of debt.

00:30 ¿Cómo te afecta? - The Program for Latin America's Youth**01:00 DW News - News****01:15 DocFilm****Never Again - How Strong is Democracy in Germany?**

'Never again' was the motto in Germany after 1945. This film shows how this commitment became a pillar of society. What measures are needed today to defend humanist values and preserve democratic achievements?

The film provides an insight into the challenges and hopes of remembrance culture work and examines how the motto 'never again' is evolving into an educational policy obligation in Germany.

With the end of the Second World War, two words became an integral part of democracy in the Federal Republic of Germany: 'Never again'. Never again fascism, never again war, never again a dictatorship like National Socialism, in which minorities are persecuted, disenfranchised and murdered. This endeavor gave rise to a culture of remembrance, which manifested itself in the form of education in schools, memorials and days of remembrance.

But sometimes, it seems like the more frequently these words appear in official speeches, the more they lose their clarity and meaning. The discourse on a meaningful culture of remembrance is mainly conducted in academia, and often doesn't consider the realities of life in society at large.

The documentary is an incisive and confrontational look at practical remembrance work. It shows what measures need to be taken to protect democracy and human rights in Germany. It focuses on the everyday lives of those who put the culture of remembrance into practice, and those who benefit from it.

01:00 DW News - News**01:15 DocFilm****Varanasi - India's Holy City of Death**

In India, Varanasi is considered a holy city. Millions of Hindus believe that people who die here, in this city on the Ganges, are lucky. Because if they are cremated here, they can break the eternal cycle of birth, death and rebirth. Director Oliver Mayer grew up in a world in which most people are influenced by the Christian promise of eternal life. In Varanasi, he wants to understand why it is considered salvation to escape a cycle of rebirth.

He himself has already had to come to terms with death: A few years ago, his mother died, and it took him a long time to come to terms with his grief. He is fascinated by the fact that the end of life is not necessarily seen as negative in Hinduism. He wants to know how people manage to face death pragmatically and without fear - indeed, almost looking forward to it.

Mayer visits a very special hospice for the dying in Varanasi. Here, he encounters a different, more relaxed approach to death. He meets extraordinary people. They include the priests and relatives who care for the dying, workers from lower castes who cremate the dead and children like nine-year-old Kajal, who poses for photos dressed as the deity Shiva to earn money to support herself, her mother and her little brother.

USA - The Rise of the Ultra-Right

How has the ultra-right made it to the heart of American politics? By gradually occupying positions of power in politics, the judiciary and the media and steadily expanding its sphere of influence. Adherents have been bolstered by Trump's 2024 election victory.

The tightening of abortion laws, the 2021 storming of the Capitol, a flare-up in racist violence: The US far-right has never been more powerful and visible than it is today - and that's not just due to Donald Trump. The ultra-right has managed to gain a foothold at the very heart of US politics. As part of a strategy to win the 2024 election, it was ready to create a social divide similar to that of the secessionist wars, plunge the country into chaos and cause democracy to totter.

The triumph of the radical right is the outcome of a well-thought-out strategy set in motion more than 40 years ago by a conservative minority thirsty for power. And this group has pushed through its agenda under the nose of the world. Today, we can see how successful its strategy was: The ultra-right has gained control of the key centers of power, a process accelerated on all levels by Donald Trump. With his help, the ultra-right now has control of the Supreme Court. Its advance continues unabated, with Trump's election victory marking an interim high point.

SUN 2025-01-19**00:00 DW News - News****00:02 DocFilm****Superfood Berries - A Bitter Aftertaste**

In Germany, five kilograms of berries are eaten per capita every year. And the trend is rising. The German harvest can't meet this demand and that's why many berries are imported. From places where their cultivation is bad news for both people and for nature itself.

Southern Portugal is a booming region for berry production in Europe. The country's cultivation zone has increased fivefold in recent years - to almost 5,000 hectares. One of the producers: Logofruits. The Portuguese company grows blueberries on its plantation in Odemira on 75 hectares of land. For the owner, Lourenço de Botton, the biggest challenge is finding enough workers for the harvest season. Blueberries have to be picked by hand, a labor-intensive process that requires Logofruits to employ around 600 workers per day. Many of those toiling in the orchards in the Alentejo region come from Nepal, India or Bangladesh.

Odemira's mayor Helder Guerreiro explains that almost 11,000 migrant workers from over 80 countries now live here. This corresponds to around 40 per cent of the municipality's population. Although on the one hand it's a great opportunity for the region, which has struggled with emigration in the past, it also presents a huge social challenge. Another problem, according to Guerreiro, is intensive farming's huge demand for water.

One thing's for sure: a growing appetite for berries in Germany has consequences for the countries where they are grown. Blueberries and raspberries also grow in Germany, but not all year round. In summer, supermarkets should be full of regional fruit. But they're not. Even during the domestic season, more and more produce from abroad can be found on the fresh produce shelves. What does this mean for German berry producers?

Erik Appel from Darmstadt grows raspberries, among other things. However, berries cultivated in Germany are completely different to those that have been shipped over long distances. These varieties have been bred to be particularly robust and long-lasting. When it comes to raspberries from the region for the local market, flavor is paramount. And in that respect, says Erik Appel, nothing beats local berries. In terms of labor costs however, it's almost impossible to compete with imported goods. After all, Germany has one of the highest minimum wages in Europe. This is reflected in the price - imported goods are often cheaper than regional berries.

Burns, strangulation, broken bones. The list of signs of torture is long and can be seen on some 27,000 photos showing dead Syrian civilians. The man who smuggled the photos out of the country calls himself "Caesar".

For years, "Caesar" worked as a photographer for the Syrian military, taking pictures of civilians tortured to death and documenting their cases. Who are the dead, what was their fate, why did they disappear in Bashar al-Assad's prisons? Throughout Europe, the families of the victims, supported by international lawyers, activists and Caesar himself, are searching for truth and justice. They are investigating the Syrian death machine and the actions of its highest officials. But they find themselves torn - between the political agenda of western governments and the terror spread by the dictatorship in Damascus. How far will they go?

00:30 Made in Germany - Your Business Magazine**01:00 DW News - News****01:15 DocFilm****Creative and Combative - Mexico City by Night**

Mexico City used to inspire fear. But these days, the megacity is a hotspot for tourists. Still, the city has not lost its fighting spirit. Some use it to put on a show, while others simply try to survive.

With around 22 million people, Mexico City is the largest Spanish-speaking city in the world. But this isn't the only reason why it attracts increasing numbers of tourists each year. Indeed, the mega-metropolis has pretty much everything travelers could wish for: History, culture, art, music, excellent street food, Michelin-starred restaurants, spectacular nature and, of course, the people who call Mexico City home. Locals are known for their open, respectful and life-affirming vibe.

Lalo Garcia, for example, is a star chef on the Mexican culinary scene. He's living the reverse American dream: he grew up in the USA as the child of illegal immigrant field workers and was deported to Mexico as an adult, to a country he barely knew. Despite these hardships, he has found success and happiness here.

Angel Palafox is a former pilot. He realized that you can make a lot of money in Mexico City by operating private ambulances. After all, there are far too few public ambulances to serve a city of 22 million people. Private companies fill the gap and make money from it. Some ambulances, like Angel's, are well equipped and have paramedics or doctors on board. Others are souped-up vans with minimal equipment. To get to the scene as quickly as possible, they follow the police scanner and search Facebook for posts about accidents. They hand out business cards outside hospitals in case an ambulance is needed. It's a business proposition -- but the private ambulances also provide an important service in an underfunded healthcare system.

The film also follows a trans activist, someone who's known as a 'bicycle mayor' and Mexican lucha libre fighters. All the protagonists are representative of how creative and combative the people of Mexico City are.

Bhutan is famous as the 'land of happiness' in the Himalayas. But little is known about the country's subtropical South. This film explores the little-known region, where people live according to ancient traditions and maintain close-knit communities.

The landscape in Bhutan's South is characterized by dense jungle, unique biodiversity and mainly Hindu communities. In places that don't get many visitors, it's possible to get a sense of what life in the lowlands of Bhutan at the foot of the mighty mountain range is all about: community and togetherness.

Even though education and healthcare are free, there's no state welfare. Support is provided by society, instead. Far away from the urban centers, the documentary accompanies people who know how to help themselves in times of need. Like dentist Tenzin, who treats people in remote mountain villages free of charge. The documentary also shows the healing rituals of Bhutan's youngest shaman: 16-year-old Suresh feels he has been chosen to mediate between the living and the dead. He left school at the age 12 to pursue this calling.

In the heart of the jungle, shop owner Rinzin waits eagerly to be connected to the power grid and the Internet. The mother-to-be hopes this will not only make life easier for her, thanks to a fridge and rice cooker, but will also improve her children's education.

Many of Bhutan's traditions and customs are little-known. Many people here have a profound compassion: not only for their fellow human beings, but also for animals. Following an old Buddhist practice, the devout Sonam tries to save thousands of fish. Sonam is convinced that this is the only way he can preserve Bhutan's spiritual heritage and follow the path of Buddha.

I Survived Auschwitz**

Eva Umlauf is one of the youngest survivors of the Auschwitz concentration camp. She has no active memory of the time she spent there. For more than 70 years, her past and her family's fate played no role in her life.

But when she suffered a heart attack at the age of 74, she realized that she had to come to terms with this part of her life.

Eva Umlauf was two years old, emaciated and extremely ill when the Red Army liberated the Auschwitz camp on January 27, 1945.

Her mother returned with her two daughters to her father's birthplace, near Bratislava. Everyone else in the family was dead. A shadow of trauma lay over Eva's young life.

During her medical studies, she met her first husband Jakob, a Polish Jew, and followed him to Munich. She found happiness and security at his side.

But a few years later, Jakob died in a tragic accident. Eva was left on her own to fend for herself and her young son. Eventually, she remarried and had two more sons.

Later in life, her past suddenly caught up with her. She decided to consciously confront it, to give her children and grandchildren a life less burdened by the past.

Gas From Africa**

Africa is viewed worldwide as a "sleeping gas giant". The continent's total gas reserves are almost as large as those of the US. But will local people actually benefit from the export of gas, as hoped?

Europe is looking for new gas producers. This is because Russia's war against Ukraine has highlighted Europe's and especially Germany's dependence on Russian gas. One possible solution is to increase gas imports from Africa, which already account for around a fifth of the gas used in Europe.

Mozambique in southern Africa is expected to become the third largest African exporter of liquefied natural gas. Senegal in West Africa is also seen as a major future gas supplier.

What does this development mean for the people of Mozambique and Senegal? Will they actually benefit from gas exports as hoped? Can the utilization of gas reserves create new jobs and help to reduce migration from Senegal to Europe?

So far, the gas sector in Mozambique has led to conflict rather than prosperity. Is a turnaround in sight? Or is African gas coming too late to be relevant for European climate neutrality targets?

Running a restaurant as an Indian woman? Almost unthinkable in India. But Prateek Reen does it -- in Munich. This film shows the journey of a young woman from an Indian mountain village to Bavaria.

She will never forget how poor her family once was, after they lost everything in a fire. She has experienced the world as fleeting and fragile. But Prateek Reen also knows that you can take a recipe with you, on a small piece of paper. A memory. The taste of freedom. And that you can use it to create a new world in a foreign country. In Germany, she did just that, with her own restaurant, called "Madam Chutney".

01:00 DW News - News**01:15 DocFilm****The "Caesar" Files - Seeking Justice for Syria's Victims of Torture**

Burns, strangulation, broken bones. The list of signs of torture is long and can be seen on some 27,000 photos showing dead Syrian civilians. The man who smuggled the photos out of the country calls himself "Caesar".

For years, "Caesar" worked as a photographer for the Syrian military, taking pictures of civilians tortured to death and documenting their cases. Who are the dead, what was their fate, why did they disappear in Bashar al-Assad's prisons? Throughout Europe, the families of the victims, supported by international lawyers, activists and Caesar himself, are searching for truth and justice. They are investigating the Syrian death machine and the actions of its highest officials. But they find themselves torn - between the political agenda of western governments and the terror spread by the dictatorship in Damascus. How far will they go?

"Pretty people have it easier in life," says 15-year-old Moritz. When he posts a video of his body on social media for the first time at the age of 13, it takes a toll: Moritz is bullied at school and starts thinking he's far too chubby. These days, does the path to masculinity lead straight through the gym? Are boys no longer allowed to be slim or chubby? For almost a year, the filmmakers follow five young men as they make their way from their childhood bedrooms onto social media and into the gym, documenting their journeys around body image and male identity.

00:30 ¿Cómo te afecta? - The Program for Latin America's Youth**01:00 DW News - News****01:15 DocFilm****Breaking the Status Quo**

Three people, living three unusual lives, in three Eastern European countries. This film's protagonists are united by the challenges, suffering and constant change they face - as well as by their confidence that things will turn out well in the end.

When Lend Mustafa loses his mother, he plunges into a deep crisis. She was his most important support as he embarked on a difficult journey: Lend had decided to live not as a woman, but as a trans man. Not an easy decision in the patriarchal Kosovar society in which Lend lives. But Lend stays true to his decision and goes on to open a club in Kosovo for the queer community.

Ekaterina Strajewa is also familiar with the challenges of living in a patriarchal society. In Bulgaria, she was a successful racing driver. Despite her success, she faced ridicule for being a woman on the racetrack. Then an assault forced her to give up her profession. Her whole life was thrown into question. But she manages to fight her way back and climbs into the cockpit once again.

Bashkim Lilo grew up in the Albanian mountains and worked as a shepherd. When he was offered the opportunity to train as a nursing assistant, he jumped at the chance. Because it was clear to him that this was the only way he and his family would have a future in Albania.

Shades of Shame**

Shame. For some people, it gets in the way of taking risks and living the life they dream of. For others, it keeps them trapped in negative feelings. The stronger the shame, the more we try to hide it from others.

This is precisely what gives shame so much destructive power over us. In this documentary, three people tell their stories. They share their personal experiences, and the consequences of their shame: Addiction, self-harm, depression. Experts explain why we feel ashamed in the first place, how shame influences our self-image and how we can find a way out of this painful feeling.

Because shame hurts. At the same time, shame is crucial to helping us to live together. Shame turns us into social beings, who have internalized the norms and rules of the community. To what extent shame benefits coexistence is also a topic of research. In view of social media, do we need more shame, as a moral cement, so that we behave more respectfully towards each other? Or would less shame be better?
